

Luxembourg, September the 12<sup>th</sup> 2022

Dear Customers,

The Living Building Challenge is a standard for the construction industry which proposes a sustainable design framework. The International Living Future Institute (IFLI) which is a nonprofit working to build an ecologically-minded, restorative world for all people based in USA has published a Red List<sup>i</sup> of chemicals that pollute the environment, the list contains more than 5800 substances and we certify that all the components of the Red List are not added in our steel during our casting and rolling processes in our ArcelorMittal Long Europe premises of:

- ArcelorMittal Belval & Differdange sites of Belval, Differdange and Rodange
- ArcelorMittal Hunedoara
- ArcelorMittal Guipuzcoa sites of Bergara and Olaberria

Please note that raw materials (iron ore and recycled steel) used to produce steel products may contain traces of Cd, Hg and Pb in the raw materials. During the steelmaking process, a major part of these chemical is eliminated from the steel and captured in our de-dusting systems for further treatment. We hope the present declaration will help you. For any further information/clarification, please feel free to contact us.

---
